Measurements of position and angular displacements of laser beams

- Analyzes angular directions (θ_x θ_y) and position direction of incoming laser beam into its aperture
- Versatile - Measures Power and Angular incoming direction using PSD detector technology
- Precise: Down to 0.1 μm resolution & 50 Hz digital filter, and down to 0.005 mRad resolution.
- Two basic versions: 50 mm & 100 mm Focal Length, other options are available.
