

PMI-1 Ferrule Protrusion Measurement Device

Nanometer Technologies has developed a device for batch measuring the ferrule protrusion of PC style connectors. This product will save your company time and money by quickly identifying connectors with different ferrule lengths. This is essential to mass connection polishing as multi-length ferrules can cause imperfections or connectors not to be polished at all.

The PMI-1 is designed for quick and easy use. Whether you're in the field or in the laboratory, the PMI-1 will help reduce mistakes that can be costly down the road.

Advantages:

This product was developed to help customers maintain a high quality consistent polish. It is designed to batch measure the ferrule protrusion on 2.5mm PC style connectors.

This product will save you time and money by quickly identifying connectors with different ferrule lengths.

- **It is quick and easy to use.**
- **It is compact in size and portable.**

Specifications:

Accuracy of Measurements.....+/- 5uM
Repeatability.....5uM
Type of Connectors.....FC,SC,ST,Escon,FDDI
(2.5 mm Ferrule Connector)
